Custom Products Designs Cab for Club Car Carryall[®] Utility and Transport Vehicles

Litchfield, Minn. (October, 2014) Custom Products of Litchfield Inc. has designed an optional cab for the Club Car Carryall[®] utility and transport vehicles, featuring easier assembly and installation, a lighter, stronger cab, better visibility, and added comfort for operators. The new cab will be featured at GIE+EXPO at booth number 9150.

The new improvements on the cab started with the use of a custom profile Roll Over Protection System (ROPS) frame. The cab for the Carryall is enhanced to make its section lighter and stronger for even more visibility from the operator's seat. Modifications to the frame have resulted in more robust mounting and improved overall cab sealing, which allows for comfortable operation in any weather.

To give the cab a more cohesive feel, Club Car and Custom Products were able to develop cab-to-vehicle interface points that have been made significantly simpler to assemble and install than previous models. To keep wind and rain out, the cab doors and windshield sits flush with the frame, so it does not appear bolted on.

“Working closely with Club Car, Custom Products incorporated the top features of the newly customized cab with the feedback we received from customers,” said Scott Maki, vice president of development at Custom Products. “The new features are designed to be simple to install, stronger but lighter, and keep the driver and passenger comfortable while also keeping the occupants out of weather.”

Strategic use of molded plastics and a creatively designed overhead console resulted in cleaner harness routing and a more finished interior appearance. When properly equipped, the overhead console acts as ductwork to distribute airflow to the driver and passenger to help keep them cool or for nice weather days, the operator can utilize the standard tip-out front window, which integrates cleanly with the new hood.

Since the cab is integrated, no adapter kit is necessary. This and other design changes make the cab much simpler to install and are available in pre-configured packages or a-la-carte to accommodate customers' needs. The Carryall utility vehicle for Club Car is available now from Club Car dealers.

ABOUT CUSTOM PRODUCTS

Founded in 1959, **Custom Products of Litchfield, Inc.** serves **off-highway OEMs** by designing and manufacturing the best looking, fitting and functioning cabs and operator protective systems. The company applies its expertise using **industry standards** to design better **ROPS, FOPS, OPS** and **cabs**, as well as help manufacturers manage risk in the areas of safety and compliance. Custom Products offers a wide range of products and provides all levels of design and manufacturing to meet OEM needs. For more information, visit <http://www.800cabline.com/>.
